

nbn POI Backhaul

Telstra Wholesale's nbn POI backhaul solution provides a cost effective way to transport CVC traffic from nbn™ POIs to your points of presence (PoPs).

With low upfront costs and a solution tailored to your specific requirements in this rapidly growing and changing market, the nbn POI backhaul solution from Telstra Wholesale introduces an optimal way to run your own services on the nbn.

Available at all 121 nbn POIs and supported by Telstra's reliable and secure optical fibre network available country wide, the nbn POI backhaul solution provides the necessary flexibility

to help your business growth as the demand for nbn services increase.

With bandwidth options of up to 10Gbps, the nbn POI Backhaul solution will cater for the increasing need for high capacity and reliable performance, with optional proactive monitoring to ensure a highly robust data transport solution.
